

-  Transforms MMF to SMF
-  Plug-and-Play
-  Up to 400Gbps
-  Passive

STARCONVERT

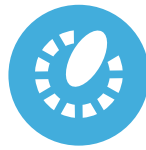

Convert Multimode to Singlemode

STARCONVERT by Starview Technologies is an innovative solution that enables Singlemode transmission over Multimode Fiber (MMF) infrastructure. This plug-and-play device boosts network performance and capacity without the need for costly cabling replacements, making it an ideal choice for data centers, building interconnections, and high-speed networking.

Advanced Technology

Simple Integration

Immediate Upgrade

Advanced Technology

Utilizes state-of-the-art technology to focus Singlemode laser light over MMF, enabling high-speed transmission.

Simple Integration

Comes pre-assembled in a 19" rack-mountable chassis with up to 12 STARCONVERT modules, appearing as a standard patch panel.

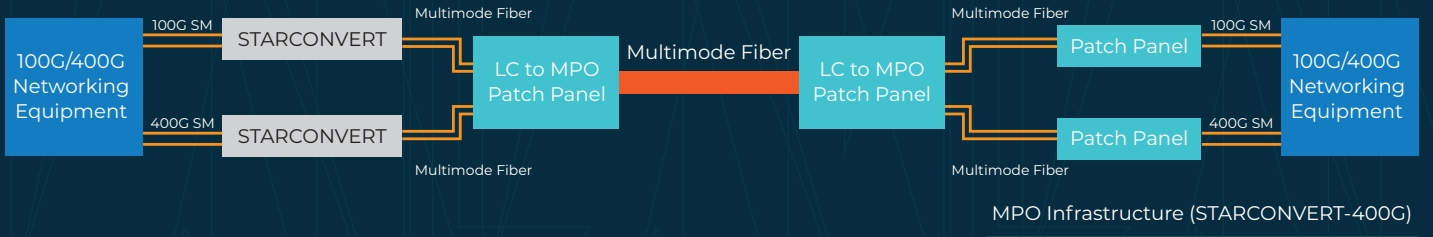

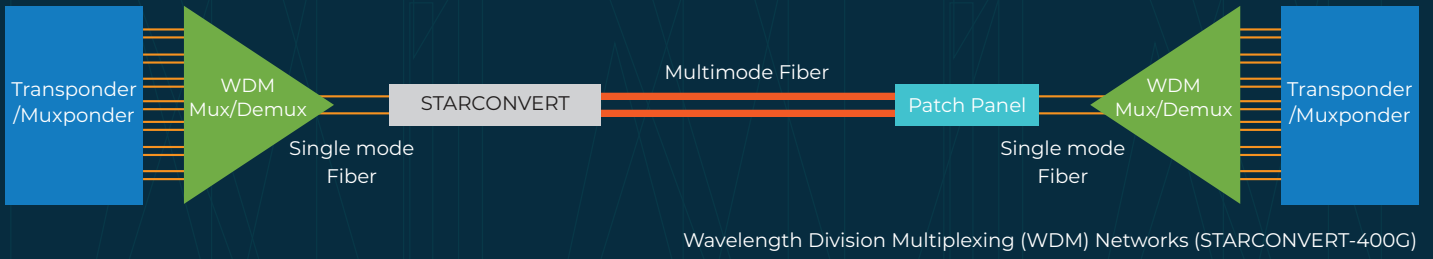

Immediate Upgrade

Converts existing MMF into Singlemode transmission effortlessly, boosting your network's capabilities instantly.

For more information about STARCONVERT and how it can revolutionize your network infrastructure, visit our website or contact our sales team today!

Convert Your MMF Infrastructure Easily

1 Maximize Existing Infrastructure

Upgrade your Multimode Fiber (MMF) to Singlemode transmission without the cost and hassle of replacing cabling.

2 Boost Performance

Enhance bandwidth and capacity, ensuring your network can handle higher data rates and demanding applications.

3 Cost-Effective

Saves time and cost on expensive labour by utilizing your existing fiber optic infrastructure.

Where Can You Use STARCONVERT?

Wavelength Division Multiplexing Infrastructure:

Upgrade your infrastructure with CWDM/ DWDM to maximise the capacity of the MMF infrastructure

Building Interconnections

Ideal for converting existing MMF into Singlemode transmission for any data rates between 1Gbps to 100Gbps

High-Speed Networking:

Suitable for enhancing Singlemode interfaces of 100G/400G networking equipment via MMF infrastructure.

Advantages of STARCONVERT

- Upgrades any MMF Types (OM1/OM2/OM3/OM4/OM5)
- Supports any Singlemode wavelengths from 1250nm to 1600nm
- Any data rates between 1Gbps to 400Gbps including CWDM and DWDM
- Compatible with any transmission protocol
